

Special tools.

Sample- & small series tool.

THE INDIVIDUAL ONE.

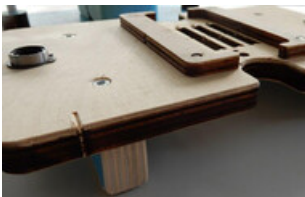

The tool is a decisive factor for a good die-cutting result. And its adjustment to the material to be cut. With our individual test tools in small format, we can produce test samples for you. Used on our sample cutter, we carry out test die-cutting for you. The ultimate practical test for perfect cutting results of the tools in later live operation.

But not only that. We can also produce small series for you. And the right tools for the job. Embossing dies. Manual stripping tools. Or other small tools.
