

## Cutting dies for labels.

### Perfectly sticking.

Simple to complex. Cutting dies for labels. A wide variety. Often a special challenge: die cutting very thin materials. Labels have to be kiss cut or through cut. No matter how thin the material is. Our flatbed tools in steel rule technique are the perfect fit. To master your requirements. With special dieboards. With special cutting rule. For in-mould labels. For PP-labels. And for other plastic labels. For the most diverse application areas. On cars. On beer bottles. On make-up articles. As decal images. Or as plant tags. Highest performance for your labels and stickers.
